Brand Presentation

At **Selya**, we select authentic honey, just as nature intended.

Because honey is a purely natural treasure, we treat it with the utmost care at every stage of the process. From storage in modern, temperature-controlled warehouses, through gentle liquefaction, automated filtration and standardisation of colour, aroma and taste, to careful packaging, we ensure that the honey remains fresh and retains all its natural qualities when it reaches your table.

We guarantee superior quality honey, thanks to rigorous hygiene and quality controls:

1. RIGOROUS HYGIENE

Every step of the process, from sourcing to bottling, is carried out in accordance with veterinary and health regulations, and our products are regularly tested in certified laboratories.

2. QUALITY

Our mission is to provide a top-quality product in which all the natural properties, nutrients and purity of honey are fully preserved. Every jar of **Selya** reflects our commitment to nature, craftsmanship and your well-being.

Origins and Terroirs

Spanish Honey – The natural expression of a generous terroir

Spain is a country of light, floral diversity and deep traditions. For centuries, Spanish beekeepers have harvested honey of incomparable richness, born of sun-drenched landscapes and wild nature.

Our **flowers honey** comes from vast Mediterranean meadows, where bees freely forage on an abundance of flora, including clover, lavender, rosemary and other wild flowers. This floral honey, sweet and delicately fragrant, captures all the poetry of the Spanish countryside.

As for **forest honey**, it comes from wooded areas rich in oak, pine, chestnut and arbutus trees. Darker and more full-bodied, it reflects the depth of the Spanish forests and offers a warm, subtly woody and slightly spicy flavour. These honeys are the result of ancestral know-how, passed down from generation to generation, and a deep respect for the environment. Each jar tells an authentic story of nature and passion.

Origins and Terroirs

Honey from Slovakia – Floral purity in the heart of Europe

In the heart of Central Europe, Slovakia offers a preserved natural setting, nestled between deep forests, flower-filled valleys and peaceful hills. This authentic landscape, largely untouched by intensive farming, is a true paradise for bees, which find a unique floral biodiversity here.

Our clear and delicate **Acacia honey** comes from the white flowers of the black locust trees that cover the Slovakian hillsides in spring. Appreciated for its sweetness and smooth texture, it appeals to lovers of subtle and light flavours.

Flower honey, meanwhile, comes from bees foraging freely in natural meadows, gathering nectar from clover, dandelion, mallow and poppy flowers. It is a harmonious floral blend that reflects the vibrant and generous nature of Slovakia.

Finally, **Linden honey** is distinguished by its intense floral aroma with fresh, slightly minty notes. It is harvested in the height of summer, when the large lime trees in bloom release their soothing fragrance in the Slovakian forests. During the day, the bees gather this rare nectar, concentrated in the flowers blooming under the summer sun. This honey has a lively, aromatic flavour, sought after for its natural qualities and unique character.

It is a true expression of the Slovakian terroir, blending the freshness of the woods with traditional beekeeping methods.

All these Slovakian honeys are the result of traditional beekeeping, carefully passed down from generation to generation. They reflect a rare harmony between bees, flora and humans.

Product Range

Linden honey

Linden honey

Lime honey is one of the best honeys in general. The honey has a light yellow to greenish colour, is clear, has a delicious and pleasant taste and a fragrant aroma of lime. Like agate, it crystallizes slowly and later.

Benefits of linden honey

Linden honey improves metabolism and detoxifies. It has a diuretic effect (urine-producing) and, due to its high content of antibiotic substances, is used to treat urinary tract and rheumatic diseases. Honey contains high enzymatic activity. It helps fight colds in bad weather and fever, has anti-inflammatory properties, and is also effective in treating acute and chronic inflammation of the upper respiratory tract, bronchial asthma, inflammation of the throat, sinuses, and bronchi, as well as tonsillitis. It promotes coughing and sweating. It goes very well with linden tea, and its aroma blends well with herbal teas and ginger.

ACACIA HONEY

Acacia Honey

Acacia honey has a harmonious and delicate taste, accompanied by a subtle scent of acacia flowers. Mild and refined, it is considered one of the sweetest honeys. Through its high fructose content, it also stands out for its very slow crystallisation, which gives it a pleasant, fluid texture for longer.

Benefits of acacia honey

Being very rich in simple sugars, acacia honey is easily and quickly absorbed by the body. It is therefore a valuable nutrient for physical and mental regeneration.

It is often used to relieve various gastrointestinal disorders such as cramps, digestive problems, inflammation of the stomach and intestines, and hyperacidity. Acacia honey is also known to promote the healing of gastric and duodenal ulcers by accelerating the regeneration of the mucous membrane and improving digestive motility.

Thanks to its low trace element and amino acid content, it can also be used as a dietary supplement in the treatment of kidney and urinary tract diseases.

Finally, due to its delicate aroma and smooth texture, acacia honey is a highly prized natural sweetener, particularly in desserts, hot drinks and fine culinary preparations.

FLOWER hONEY

Flower Honey

Flower honey is harvested by bees mainly from wild flowers and fruit trees. It contains pollen grains from various plants, which enrich the honey with important natural substances that have stimulating effects. Flower honey is versatile and can be used in baking, eaten as is and, above all, to sweeten tea and other beverages.

Benefits of flower honey

Flower honey is a natural concentrate of flower and plant nectar, mostly from medicinal plants. It is easy to digest thanks to its high content of simple sugars, particularly glucose and fructose. It contains pollen grains from various plants, which enrich the honey with important natural substances with stimulating effects, plant hormones, essential oils, aromatic substances, etc. Flower honey is highly valued in natural medicine.

It is the main source of nutrition for muscle tissue. Thanks to its simple sugar content, flower honey is used to provide immediate energy and is therefore particularly suitable for quickly restoring strength to hard-working people, athletes, etc.

Product Range

Forest honey

Forest honey

Forest honey has a dark colour and a pleasant aroma. Thanks to its high mineral, phosphorus and manganese content, it is an excellent dietary supplement. It is recommended for people who are very physically active and those suffering from mineral deficiency, as well as for people with upper and lower respiratory tract and lung diseases.

Benefits of forest honey

Forest honey has excellent diuretic and antibacterial properties and is also recommended for anaemia. It occupies a special place among the different types of honey, as it is produced by bees from the sweet sap of trees. It is particularly suitable for ginger and herbal teas to strengthen the body. Honey boosts the body's natural defences. It has a beneficial effect on blood circulation, nourishes the heart and contains substances that promote bone formation. It strengthens the nervous system, promotes good sleep, a good mood and a good memory. It is very tasty in milk or white coffee.
